

Dynamic room pricing

To facilitate price management, you can set up dynamic room pricing, that is, set the amount to add or remove to switch from one room category to another.

The room categories are those imported during the creation of your website. By default each room is independent (Master).

It is preferable to determine the reference room, that is to say the one which will be the basis of the calculations.

Example: The hotel has 4 accommodation categories: - Standard Double Room With Terrace
- Suite With Terrace
- Standard Double Room With Terrace - River View
- 2 Adjacent Double Rooms

The Standard Double Room With Terrace will be the basic room, therefore independent Room (Master), the other rooms will have a dynamic link.

- Click on  the Suite with terrace.

- Select the independant room

Independent room (Master)

- Choose between « "+" and "-" »

, Enter the amount or rate

EUR %

- Click on  . Repeat for the other room categories if you want dynamic pricing.

In our example, you will only charge the price for the independent room (Master): Standard Double Room with Terrace

You can change or deactivate the dynamic pricing at any time.

In case of deactivation of the dynamic pricing, the room will be independent again (Master). So don't forget to charge the prices for this room.

Dynamic Room Pricing			
ID	Room Name	Details	ACTION
269280	Standard Double Room With Terrace	Independent Room (Master)	
269282	Suite With Terrace	Dependent Room (Slave) =(Standard Double Room With Terrace) +30 EUR	Edit Deactivate
269284	Standard Double Room With Terrace & River View	Dependent Room (Slave) =(Standard Double Room With Terrace) +20 EUR	Edit Deactivate
269286	2 Adjacent Double Rooms	Dependent Room (Slave) =(Standard Double Room With Terrace) +50 EUR	Edit Deactivate
